If you do reprint please be responsible and use non toxic inks and recycled paper products as we do.

About Us (How It All Started)

In 1997, the world began to wake up to the realization that man made greenhouse gas was causing global climate change, and the Kyoto Protocol was born. This was a legally binding agreement under which industrialized countries would work to reduce their collective emissions of greenhouse gas. Canada was active in the negotiations and under the Cretian government, Canada signed the accord in 1997 and ratified it in parliament in 2002.

Website Reference: http://en.wikipedia.org/wiki/Canada_and_the_Kyoto_Protocol

In 2004, the liberal government put the word out that it was necessary for all Canadian citizens to work together to achieve the goals of Kyoto and work to reduce greenhouse gas and that all citizens should start taking responsibility for their own actions.

Quote from Environment Canada, 2004 “Each of us has an effect on the environment every day: the key is to make this impact a positive one. We must all take responsibility for our own actions, whether as individuals, or as members of a community or an organization. Let's work together and become good Environmental Citizens! If you don't, who will? “

As concerned citizens and business people, we understood the urgency and in 2004 set out to upgrade our education by focusing on sustainable technologies so we could take responsibility for our own actions. We began to explore the available technologies that had originally been invented to reduce emissions but had been put on the back burner or hidden from the public. We used this education to begin to develop and manufacture sustainable solutions. We also developed new business plan models to help others to take part in working to build a new sustainable economy that we could all enjoy.

As we became active in promoting our information and sustainable solutions to various government officials as well as the general public, in the hopes that some of these plans could be used to benefit a new sustainable economy here in Canada, the response we got was completely the opposite of what was expected.

In many cases we were just ignored, and in some cases we found we were actually put on a black list and our business was targeted to be shut down. We soon came to realize that the government of Canada had no intention of following through on it's promises to meet Kyoto. While we and many others were hard at work educating ourselves and working to try and implement sustainable change the government along with its private partnerships, continued to push the fossil fuel economy as if there were no other option.

In 2002, Stephen Harper, who was then leader of the Canadian Alliance party showed his true dedication to the fossil fuel industry in a letter to his party members, even so far as stating he needed an “army of Canadians” to go to war against the Kyoto protocol and protect the oil and gas industry. The first major issue on his agenda was to kill the Kyoto protocol. This was his agenda then and was his agenda when he took office of the Prime Minister in 2006. In 2011 we all saw Canada announce it's withdrawal from Kyoto and the Justice department allowed it.

- <http://climateactionnetwork.ca/archive/e/issues/harper-talks-kyoto.html>
- <http://www.cbc.ca/news/canada/harper-s-letter-dismisses-kyoto-as-socialist-scheme-1.693166>

Most of our current government is run primarily through government private partnerships, everything from government services to taxes are all managed by these companies. The majority of them are heavily invested in fossil fuels and now it seems like more than ever there is little hope of Canada ever incorporating a sustainable economy.

We, ourselves, have been made very aware that these companies do not want to see any change from the current fossil fuel economy, even though every day we see reports showing the declining value of the "oil driven dollar". OPEC themselves announced years ago that there is no point in putting more money into oil and that the best economies will be the sustainable economies.

As it is right now anyone promoting the idea that consumers can become educated and be less dependent on fossil fuel is targeted. We have been the subject of targeting and discrimination and nearly forced into financial ruin, just because we hold on to our beliefs that it is possible to build a strong sustainable economy in Canada.

We believe our priorities are in the right place and we should not be bullied just because we choose to:

- operate a business that provides honest, decent and fair priced products, provides service on all the products we sell and focus on real customer service not just profit margins;
- design, build and promote sustainable solutions, products and business plans that can help others work towards sustainability knowing that consumers becoming educated and less dependent is the only thing that will break the corporate strangleholds..We have the right to continue to promote, discuss and change our lives to sustainable ones and anyone attempting to bully us into using toxic and health damaging products are committing crimes that are prohibited by the human rights laws.

We have never looked to shut down jobs, in fact our goal is to help transition businesses to become more sustainable, and money saved can create more jobs, less toxic jobs, jobs that will be around for many future generations. All of this can be had simply by using the sustainable technologies that are available, that are being used right now in other countries helping them achieve substantial economic growth.

To date, we are two people who have designed many building & technical plans as well as unique business plans that use sustainable technologies. We are retail providers, certified installers and technical service professionals for a variety of sustainable products. We provide an ecocatalog of products and services both online at our website <http://www.brilynstates.com> and in print for those not able to access the internet.

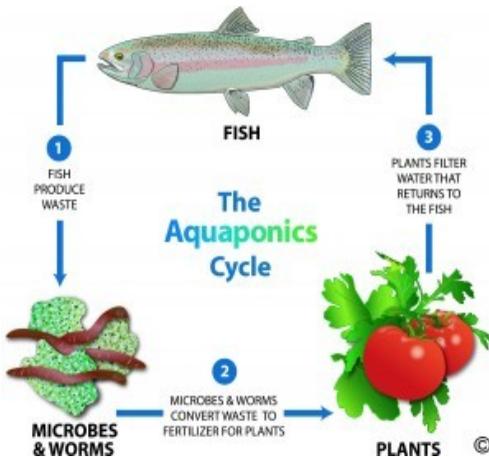

We are providing this newsletter as a method of getting important information out to people, especially those who cannot access the internet, and to promote new projects that we are working on in the hopes that others will take interest, and want to take part in building a new era of humanity. Imagine a new era! One where people work together for the benefit of each other so that we can all enjoy a peaceful life, rather than the old business as usual, dog eat dog world where only a few enjoy while the rest pay for it. What we have now is not life, it is slavery for most and it is time we set our sites on positive changes.

OUTLINE FOR TWO OF OUR CURRENT PROJECTS

“Build A Shed, Change The Future Program”

This is a program we designed to enhance the skills of experienced construction and building trades people. It is an opportunity for them to work alongside certified installers and learn the installation and maintenance techniques for solar/wind and other alternative energy technologies as well as green building skills while building our unique, alternative power sheds. As they are built they can be sold to consumers to use as backup power systems. The building experience can lead workers to achieving their international certifications in solar, wind and green building methods. More info about the program can be found on our site at <http://www.brilynstates.com> or in print on request for those not able to access the internet.

Self Sustainable Aquaponics/Greenhouse

As an add on to the backup power shed, we have design plans for a 2000 sq ft self sustainable aquaponics greenhouse, complete with LED lighting, multi level grow beds and more. Retail cost about \$6000.

This Aquaponics Greenhouse can provide vegetables, fruit, and fish for the family as well as additional income selling the excess produce. With the backup power shed providing all the power needed to operate the greenhouse, the overhead costs to keep the greenhouse running are minimal. Our greenhouse design includes full shielded enclosure to protect from weather elements, Emfs and outdoor contaminates.

If you are not familiar with Aquaponics you should know it is becoming very popular in the food production industry. It is a way to sustainably grow fish and veggies in the same growing system. If you are not familiar with Aquaponics there are some great introductions in these links below.

- <http://urbanhomestead.org/>
- <http://www.backyardaquaponics.com/>

WE NEED YOUR SUPPORT

Everyone says they want sustainability. Politicians promise it, everyone votes for it but when promises are not kept things just go back to business as usual. If you believe that it is time we all started improving our lives by learning to be more sustainable and less dependent, then please help us help you. With your support we pledge to continue to bring more sustainable products to market, pledge to continue to work towards completion of our sustainable projects and work to get our build a shed program underway.

Unlike many politicians, we won't break our promises!

There are many ways you can help us promote a sustainable economy.....

★ **Buy Products You Can Use**

Many sustainable products available through our catalog, see online at <http://www.brilynestates.com> under the Eco Store Section or contact us for print version.

★ **Advertise In Our Newsletters and on our Website**

Top Banner Ad: \$25
1/8 page: \$35, 1/4 page \$65, 1/2 page: \$95, 3/4 page: \$145
Full Page \$195
For Full Color add \$55

Welcome to the First Edition of Information Central

We create these newsletters to provide some very important information about things going on in the world of human rights, health and technologies as well as sustainable technologies that you may not find in local media sources. While it may seem that everyone has access to the internet that is not the reality. In fact two thirds of the worlds population does not have access for either personal, health or location reasons. We believe that people have the right not be forced into a tech or paperless society and that they still have the right to access to information, especially about world issues that could affect them.

Introduction

These days it is hard to keep up to date with all that is happening. If you are not keeping up with the research and education you could miss out on so many wonderful things that could be enhancing your life. Technologies that can be used by everyone for better health, reduced living expenses, and yes, even help break us away from the corporate stranglehold that so many politicians keep promising to do but never do.

There are other things going on as well that make it hard for us to enjoy our rights, freedoms, and good health and make it difficult to achieve sustainability. Much of this information is not readily available and requires many hours of online searching to find it. This is hard for most people to do because they are so stuck in the debt based system they are constantly working to pay bills, never getting ahead. If they do get some free time they are so stressed from working they will either sleep, get drunk or do drugs, just to get some relief.

These are some of the reasons why we have started "**Information Central**," an information source that is available both in print and online. We gather information about the good, the bad, and sometimes even the ugly things that are going on in the world and share it because we believe people should be aware of what is going on around them.

We hope you will freely share any of the information that you read here with people you know, especially those who cannot access the internet. The links provided throughout the newsletter and some at the end will provide more detailed info. Sign up for Membership and receive a monthly Newsletter either by email or regular mail.

LED 10W RGB Spotlight with remote control

- LED Color: 4 main colors (Green, Red, White & Blue)
- 16 different colors in total (change colors via remote controller)
- Output Lumens: 900 Lumens
- Input Voltage: 12V DC
- LifeSpan Time : > 60,000 hours
- 114mm(4.49") W x 86mm (3.39") H x 88mm(3.46") D
- Waterproof: IP65

Price: \$35.00 plus hst

Advancing Technology

Introduction To Some Interesting Sustainable Technologies

1. Build A Heater from A Catalytic Converter

This is a very good video of how to build a heater from a Catalytic Converter. We built one and made a few of our own modifications. It worked very well :)

Check it out. <https://www.youtube.com/watch?v=Xiv1aeZZnHI>

2. HHO : Hydrogen On Demand

Check these links out for some very interesting alternative transportation

- **HHO Motorcycle**

<https://www.youtube.com/watch?v=cg0XiApLPew>

- **HHO Vehicles**

Pat Barber, Hydrogen fuel, Tiny House

https://www.youtube.com/watch?v=V4_fSGvZres&index=5&list=PL6DC38A30199C5941

- **Truck Runs 100% on Water Not Gasoline** by overunity.com

https://www.youtube.com/watch?v=V4_fSGvZres&index=5&list=PL6DC38A30199C5941

- **Water Fuel Car HHO How To Build Your Own**

<https://www.youtube.com/watch?v=TzmNG4LiqEk>
<https://www.youtube.com/user/ZeroFossilFuel/featured>

3. Electric Vehicles

Check out the link at <http://steamwhistle.ca/retroelectro/>

Kudos to this team for doing something! It is a nice truck, but still has the challenge that it has to plug into the grid and still a design that will cause more electrical feedback from the grid system. If it had a power station behind it like the one you see in the video Pat Barber shows us a 120mpg 4x4 that challenge could be eliminated. (see video at <https://www.youtube.com/watch?v=IcqQFgPs5o>)

4. The GEET Fuel Processor (GFP)

is an on-board compact plasma fuel refinery that renders just about any liquid into usable and highly volatile fuel by cultivating electromagnetic and other energy fields. The GFP-retrofit engine requires only a fraction of the fuel, as the non-GFP engine, to pull the same load for the same duration of time. The exhaust from GFP-retrofit engines is completely pollution free and adds oxygen to the environment. We have built one of these and have designed some modifications to improve operations. Currently you can buy an adaptor to turn a generator into a Geet Generator for about \$100.00

Technology Issues You Should Be Aware Of

Wifi, Cell Phone, EMF, Microwave Radiation

Humans have a natural need to stay close, connected and in touch with friends and family. Big corporations have taken advantage of that need and capitalize on it by promoting the wifi and cell phone networks as the only way to stay connected.

Sounds like a great idea, but in reality, we are so inundated with electromagnetic frequencies from wifi and cell phones now that we are all getting sick. Many people don't realize they are being affected by the radiation and just assume they have another "flu bug" and just suffer through it.

1. Sources of Microwave, Radio Frequency Radiation, EMF

Common sources include airport technologies, cellphone towers, cell phones, wifi routers and hubs, wifi laptops, ipads, baby monitors, smart meters and even fluorescent lights. Unshielded power lines are also a bad source of health affecting frequencies.

"Multiple WiFi hubs, laptops, and cellphones all in one space can reach levels of over one million microwatts per metre squared." Dr. Riina Bray
"Medical Director, Environmental Health Clinic,
Woman's College Hospital, Toronto"

2. Signs and Symptoms of Chronic Exposure to EMF

Neurological: headaches, dizziness, nausea, difficulty concentrating, memory loss, irritability, depression, anxiety, insomnia, fatigue, weakness, tremors, muscle spasms, numbness, tingling, altered reflexes, muscle and joint pain, leg/foot pain, "Flu-like" symptoms, fever. More severe reactions can include seizures, paralysis, psychosis and stroke.

Cardiac: palpitations, arrhythmia's, pain or pressure in the chest, low or high blood pressure, slow/ fast heart rate, shortness of breath.

Respiratory: sinusitis, bronchitis, pneumonia, asthma.

Dermatological: skin rash, itching, burning, facial flushing.

Ophthalmologic: pain or burning in the eyes, pressure in/behind the eyes, deteriorating vision, floaters, cataracts.

Others: digestive problems; abdominal pain; enlarged thyroid, testicular/ovarian pain; dryness of lips, tongue, mouth, eyes; great thirst; dehydration; nosebleeds; internal bleeding; altered sugar metabolism; immune abnormalities; redistribution of metals within the body; hair loss; pain in the teeth; deteriorating fillings; impaired sense of smell; ringing in the ears.

3. Microwave and radio frequency radiation is now associated with

attention deficit disorder, autism, sleep disorders, multiple sclerosis, Alzheimer's disease and epilepsy, as well as asthma, diabetes, malignant melanoma, breast cancer, and other illnesses that have become increasingly more common.

Interesting Fact

Most studies that state there are no health effects are industry funded"

4. Military Networks, Private Security & Microwave Weapons

There are huge investments and tax dollars going towards funding to build new, higher frequency cellular networks for military and private security companies. Weapons manufacturers are building new weapons of war that use these microwave frequencies. From what we understand, some of these weapons can disable, burn or kill a human from a long distance away and that smaller versions are being marketed to consumers, as personal security devices. Raytheon.com website is one of the sites we discovered this ..

5. EMF Promotes Mold Growth

Have you been wondering why there is so much talk these days about mold appearing everywhere. It is known that Electromagnetic Frequencies promote mold growth. Since most buildings and homes are built using fibreglass insulation, a product that does not inhibit mold, it's no surprise that we are creating a perfect habitat for mold to grow as it pleases. Mold can be the cause of some serious illnesses, like Blastomycosis. It is time we switch to better non toxic insulation that mold doesn't like, (Roxul is good), shut down the wifi, go back to hardline connections, shield the wires and bury them underground.

6. Contractors Installing Shielding In New Buildings

Many contractors are now incorporating EMF shielding into the construction of new buildings so that residents can escape the EMF frequencies. First we are told there is no harm from EMF, then we see buildings constructed with emf shielding. We know there are effects from EMF because we feel them, so they can stop trying to hide that fact. But now we question, does it really make sense to add all this extra cost in construction that will only have to be paid for by the residents when we could just shut down the wifi, go back to hardline connections, shield the wires and bury them underground.

What Are The Solutions?

1. Shut Down The Wifi, Providers Invest More in Wired Services

Cell phone and internet providers already have the ability to install hard wired internet connections, it's just been cheaper to run the wifi. With hardline connections available in most places people can still carry an internet tablet and use it by plugging into a hardline connection. It is time these corporations that play on human need stop playing with human health and begin to invest some of their profits back into providing hardline connections then we can shield the wires and bury them underground.

2. Shield The Wires

Power grid lines, and utility wires that emit harmful frequencies can be shielded. Yes it might cost money to do this, but if the frequencies are causing damage to health there is no question that it is necessary for this to be done to ensure the health, safety and well being of everyone.

3. Bury the Shielded Wires

Once the wires are shielded they can be safely buried underground so we can keep our wired conveniences without getting sick.

4. Stop Investing in War Machines

We need to stop investing in war machines, and start spending money on peaceful solutions such as promoting and providing sustainable technology products and education for consumers. Stock market monopolies capitalizing on human needs has got to stop. Educated Consumers should take it upon themselves to learn how to start working together to achieve global sustainability for now and future, it is the only way it will ever get done. Protesting does not work, active involvement to build change does.

GeoEngineering, Weather Modification, Chemtrails, Atmospheric BioEngineering, Solar Radiation Management

There are chemicals being dumped in our skies nearly every day now under the guise that it is for the benefit of the environment or to ward off global warming. These chemicals eventually land on us, the plants, the animals, and in the water and on the land we use to grow our food. It doesn't really matter what scientific name you give it, it is still no different a crime than if someone threw a bucket of chemicals in your face.

If you haven't heard about geoengineering yet, you have probably already seen it and didn't realize what was going on. Just watch the sky on any sunny day. You will see planes flying overhead same as always but these specific planes will leave long trails of white or grayish color plumes behind them. These are not normal contrails that disappear as the plane moves on. We are talking about multiple planes leaving long trails either side by side or in criss cross patterns and in about twenty minutes the trails have stretched out, joined together and become one huge mass of cloud blocking out the sun.

Scientists funded by entertainment industry, high tech industries, fossil fuel and pharma industries are performing aerosol spraying in the skies, manipulating the climate through modification of Cirrus clouds, and solar radiation management (blocking out the sun). Universities are being funded by the same industries to provide the research data. Many people work hard to send their children to university, but if the child is doing research on aerosol for climate engineering to help these companies dump toxins wouldn't that mean these people are paying for their own child's demise?

Insurance companies have played with the weather for a long time now, dumping silver iodide into the clouds to make hailstones smaller so they won't have to pay out big claims. They say Silver iodide is nothing to worry about and that the worst that can happen is your mucous membranes turn blue...**Smurf effect ??????**

We think people would probably object to being covered with silver iodide if they were even aware that it is going on. As for geoengineering some say it is being done to delay global warming by blocking out the sun to keep the earth cool, some say it is being done to create a reflective cloud cover to enhance military wifi weaponry and radar systems. We say whatever the reason it's not good enough to allow dumping of toxic substances on the heads of other human beings.

At an international symposium held in Ghent, Belgium May 28-30, 2010, scientists asserted that "manipulation of climate through modification of Cirrus clouds is neither a hoax nor a conspiracy theory." It is "fully operational" with a solid sixty-year history.

Geoengineering & Nanotechnology

Nanotechnology is a science that enables scientists to create, explore, and manipulate materials that are measured in nanometres (billionths of a meter), that is, tens of thousands of times smaller than the width of a human hair. Such objects, called nanomaterials, can have chemical, physical, and biological properties that differ from those of their larger counterparts. The science of nanotechnology makes it possible to compact a whole lot of substances together into polymer packages that can be sprayed from jet spray equipment on planes.

It is said that the chemtrails we witness today are made up of heavy metals, aluminium and barium top the charts Interesting that barium is a heavy metal used by fossil fuel companies drilling for oil. Is it possible that chemtrail spraying is being paid for by fossil fuel, tech and pharma companies as a way for them to dispose of their toxic waste since they are banned from dumping their waste everywhere else?

Online you can look up Geophysical Research Letters Vol 37, it's titled "Efficient formation of stratospheric aerosol for climate engineering by emission of condensible vapor from aircraft", it is a research document discussing geoengineering (aerial spraying to control climate). This testing started many years ago. This document makes references to various universities that are involved in the testing including one in our province of Nova Scotia.

While we were exploring the laws, rules and regulations for Geoengineering we came across the GeoScience Act for Nova Scotia. The following clause from the GeoScience Act was the most disturbing...

Immunity for anything done in good faith 34. No action or other proceeding for damages shall be brought against the Association, the Council or any board, panel or committee of the Association, or against a member of the Association, Council or any board, panel or committee, or against an officer, employee or agent or appointee of the Association, for anything done in good faith for or on behalf of the Association under this Act or the by-laws. 2002, c. 7, s. 34.

It seems that any corp, with a reg'd geoscientist on the payroll can do anything they want with full immunity so long as they claim that what they did was "**done in good faith**" ?

Now for the Good Side of Nanotechnology

1. Nanotechnology & Good Health

There are many good uses for nanotechnology such as growing new skin for burn victims, growing new bones for the injured. At www.mdanderson.org they discuss The Department of Plastic Surgery's applied research lab that is named Tissue Regeneration and Molecular Cell Engineering Lab or TRAMCEL. Multi- and Inter- disciplinary research is conducted by coupling a wide array of disciplines such as biomedical engineering, biophysics, and nanotechnology principals applied towards reconstructive plastic surgery.

2. Nanotechnology Used In Construction

The Jubilee Church completed in 2003, is a flagship when it comes to the use of nanotechnology in construction . Nanostructured TiO₂ (titanium oxide) particles theoretically will keep the concrete white forever, even in smoggy Rome. The titanium oxide actually eats carbon. We use titanium oxide in the organite pendants to add some carbon eating benefits. See: <http://nextbigfuture.com> (**temple of nanoscience**)

Personal Protection From EMF and Chemtrails

While we all work to put an end to these scientific experiments on humanity, by incorporating sustainable technologies into our economy, to reduce emissions and toxins from our environment, we need to protect ourselves as much as possible. Keep in mind these are some of the things we use and find them effective for us. You should always speak to your doctor before using any of these, just in case you have any allergies etc.

1. Vinegar Outdoors: Simple metal bowl with vinegar and small tea candle underneath to heat it and evaporate it into the chemtrail covered skies. The vinegar seems to clear the air around our property on heavy spray days.

2. Tsp of Vinegar: We also drink one glass of water with 1 tsp vinegar daily to purify and kill any toxins in our systems, apple cider vinegar is also an option here.

3. Orgonite: We have created our own line of orgonite pendants, and have found that the orgonite helps ward off the emfs, and keep our natural magnetics in balance. We feel better, and find we are able to stay more focused and relaxed. Check our website or request printed copy of our catalog. <http://www.brilynstates.com> under the Eco Catalog.

4. Daily Soak: Soak for three min in a bath with oxy detergent to clear pores, then use regular soap and rinse.

5. Aloe Vera: Coat skin with aloe vera gel after you dry off to help block the frequencies.

6. Unpasteurized Honey: Use on any skin sores that appear.

7. Kelp Caps, Dulce, Immune Booster: We take a daily dose of Kelp Caps, a strand of dulce and an immune booster liquid that has colloidal silver. We find these keep the body functions in check and the Kelp and Dulce help keep the thyroid in order.

8. Shield Windows: A good way to keep Emfs from entering your home through the windows is to cover them with aluminium shielding blankets (these are the inexpensive emergency blankets you would normally use when camping). By the way they are also a great way to keep heat out in the summer, and heat in during the winter :)

Earth Element Pendants From Brilyn

Promote health and well being by enhancing the vital force energies of our bodies. As the resin hardens compressing the sand, oxides, stones, crystals and metal it creates a catalytic reaction pushing them together into one complete orgone energy force. Earth Element Pendants are a unique fashionable way to carry a bit of orgone energy with you.

Each Pendant Uniquely Designed & Handcrafted by Local Artists. Personalized or Corporate Logo Pendants created upon request.

Starting at 19.99

The Large Hadron Collider

They turned the hadron collider on again back in April 2015, which interestingly we noticed was a time when people seemed extremely agitated and feeling ill. This technology was outlawed back in the days of Tesla, yes Tesla who everyone claims as a hero, yet is the same man who announced he had figured out how to split the world in two and his experiments were shut down. After two years of intense maintenance and consolidation, and several months of preparation for restart, the Large Hadron Collider (LHC), the most powerful particle accelerator in the world, is back in operation. In April, 2015, a proton beam was back in the 27-kilometre ring, followed by a second beam rotating in the opposite direction. These beams circulated at their injection energy of 450 GeV. You can read more at this website.

<http://home.web.cern.ch/about/updates/2015/04/proton-beams-are-back-lhc>

DO YOU WANT MORE ? HELP US DELIVER by PLEDGING YOUR SUPPORT!

Thank you for taking the time to read this newsletter. **Remember**, if you believe that it is time we all started improving our lives by learning to be more sustainable and less dependent, then please help us help you. With your support we pledge to continue to bring more sustainable products to market, pledge to continue to work towards completion of our sustainable projects and work to get our build a shed program underway.

Unlike many politicians, we won't break our promises!

There are many ways you can help...

★ **Buy Products You Can Use**

Many sustainable products available through our catalog, see online at <http://www.brilynestates.com> under the Eco Store Section or contact us for print version.

★ **Advertise In Our Newsletters and on our Website**

Top Banner Ad: \$25
1/8 page: \$35, 1/4 page \$65, 1/2 page: \$95, 3/4 page: \$145
